***Allowance of Application # 09/802,974***

1. The following communication is in response to applicant's Appeal Brief received 14-July-2005.

***Examiner's Comments***

2. The current examiner of record, respectfully presents the following remarks after carefully reviewing the record:

- The amendment to Figure 3, on 21-September-2004, wherein the label "Prior Art" was incorporated into the drawing, is approved by the examiner;
- The double patenting rejection of the office action dated 25-June-2004, was apparently rescinded as of a consultation the previous examiner conducted on 7-January-2005, and remains as such.
- Claims 5-8 have been indicated as being allowable from the first office action dated 25-June-2004, and remain as such.

***Reasons for Allowance***

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the related prior art, specifically the article authored by Hong et al., entitled *Object-Oriented Modeling for Gasoline Engine and Automatic Transmission Systems*. The improvement comprises a simulator having computer-aided design programs for verifying an algorithm of a shift controller of an automatic transmission mounted on a vehicle having a

In re Application of: Hagiwara et al.

change-speed system and associated hydraulic actuators to transmit power generated by a internal combustion engine to drive wheels based on at least throttle opening and vehicle speed in accordance with the algorithm. The present invention provides: 1) a first calculating means for calculating outputs that describe the behaviors of an engine, a transmission, and a body of a vehicle at a first, or the same, calculation cycle; 2) a second calculating means for inputting at least some of the calculated outputs from the first calculating means, and for calculating an output describing non-linear behavior at a second calculation cycle; and 3) wherein the second calculation cycle is shorter than the first calculation cycle. This patentable distinction is included in independent claim no. 1.

After reviewing the discussion pertaining to the previous examiner's arguments/non-arguments for rejection, and applicant's remarks in rebuttal, the present examiner cannot sustain the previously presented inherency rejections based on the current prior art of record. For at least this reason, the examiner posits that the art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <verification of an algorithm of a shift controller of an automatic transmission mounted on a vehicle> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 4 line 24 through page 19, line 23, and Figures 1-19c. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

### ***Response Guidelines***

4. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".
